## MOTORIZED VERTICAL SLIDING SYSTEM

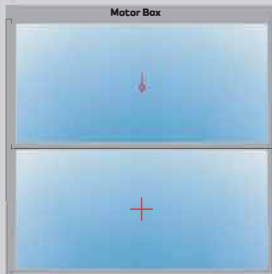

GSAL 100 engine vertical driving system is an economical system with aesthetic and minimal leaf structure. When the system is in a closed position, it adds spaciousness to the area with its wide viewing angle. It can be produced with 2 or 3 leaves.

With the help of the electronic engine used in the system, the leaves can be stopped anywhere. The mechanical system that moves the leaves can be manufactured with an optional chain or steel wire flat belt. leaves can be used with single glazing or double glazing. The system has the possibility of application in 3500mm width and 3000mm height. It prevents squeeze of hand during the opening of the leaves through the handrail cover specially designed for the system.

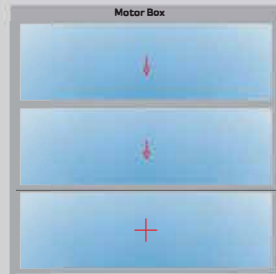

Maintenance of the motor can be done effortlessly at any time thanks to the motor box consisting of independent parts. GSAL 100 is a package product. It can be supplied in different sizes at manufacturing if desired.
