SA 65

SKYLIGHT SYSTEM

SA 65 skylight system offers efficiency and reliability in skylight applications with a wide range of designs. SA 65 system is designed to be applied on steel. There are different inner cover options at different depths to cover different steel sizes. The mounting apparatus designed for the system has the ability to work independently of the steel structure and Aluminum, and offers the possibility of application with the highest performance of the steel with different expansions.

Thanks to this feature, water insulation is kept at the maximum level since the condensate structure is not spoiled. System-specific condensate duct provides high performance water discharge by draining condensate water. Thanks to its specially designed openable leaf, it is fully compatible with ventilation and fire control systems. The Eurogrove opening leaf system offers different accessories.
