

SRA 150

MOTORIZED GLASS ROOF SYSTEM

SRA 150 glass roof system is a system that is running through a motor, which is collecting glass panels moving on rails in a fixed area.

The system is produced from modular profiles with minimum cross-section, beam, wall fixing sections, groove and support column and integrated profiles. System components consist of high quality designed functional materials.

SRA 150 glass ceiling system can be built in unlimited length and in 550 cm depth. Panel widths can be made from minimum 100 cm to maximum 150 cm. It has a special profile structure suitable for LED lighting.

The system is designed to create architectural solutions and bright environments suitable for hotels, restaurants, cafes, winter gardens.
